

Do you want to work with our sustainable organisation and prevent our water from being polluted with plastic?

NORIA IS LOOKING FOR A

(GRADUATE) INTERN

During your internship, you will work on an exciting internship or graduation project. We are looking for highly motivated students who want to help end the plastic pollution problem. We are developing a broad range of techniques that remove plastic in a sustainable manner. Currently, we are working on the implementation of multiple CirCleaners for the municipality of Rotterdam, the European project INSPIRE in the Rhine River and TREASURE at De Helsdeur. Through this proposal, we give you the opportunity to invent and develop an essential part of this machine; an efficient and ergonomic method for emptying high quantities of plastic litter from the CirCleaner.

IF YOU:

- Are a master's student with technical background.
- Are looking for an internship or graduation project.
- Like to work with future users and build and test prototypes through (integrated) product development.
- Are eager to help solve the plastic problem.
- Are very ambitious to work at a sustainable organisation and enjoy contributing your skills to impactful projects.

THEN WE OFFER:

- Independence in shaping your own internship/graduation project
- An exciting work environment at an impact tech company in Delft
- Flexibility in office hours
- Many team activities and daily team lunch
- Room for your personal development
- A unique experience in a technology driven impact scale-up

OUR MISSION

At Noria, we firmly believe that the major plastic pollution problem in water can be solved by developing sustainable, affordable and scalable solutions. We prevent plastic from ending up in the ocean by removing it close to the source from our inland water. It is our ambition to be one of the leading companies that prevent plastic from ending up in our environment. In order to reach this goal, we are continuously looking for new high-potential team members.

ABOUT NORIA

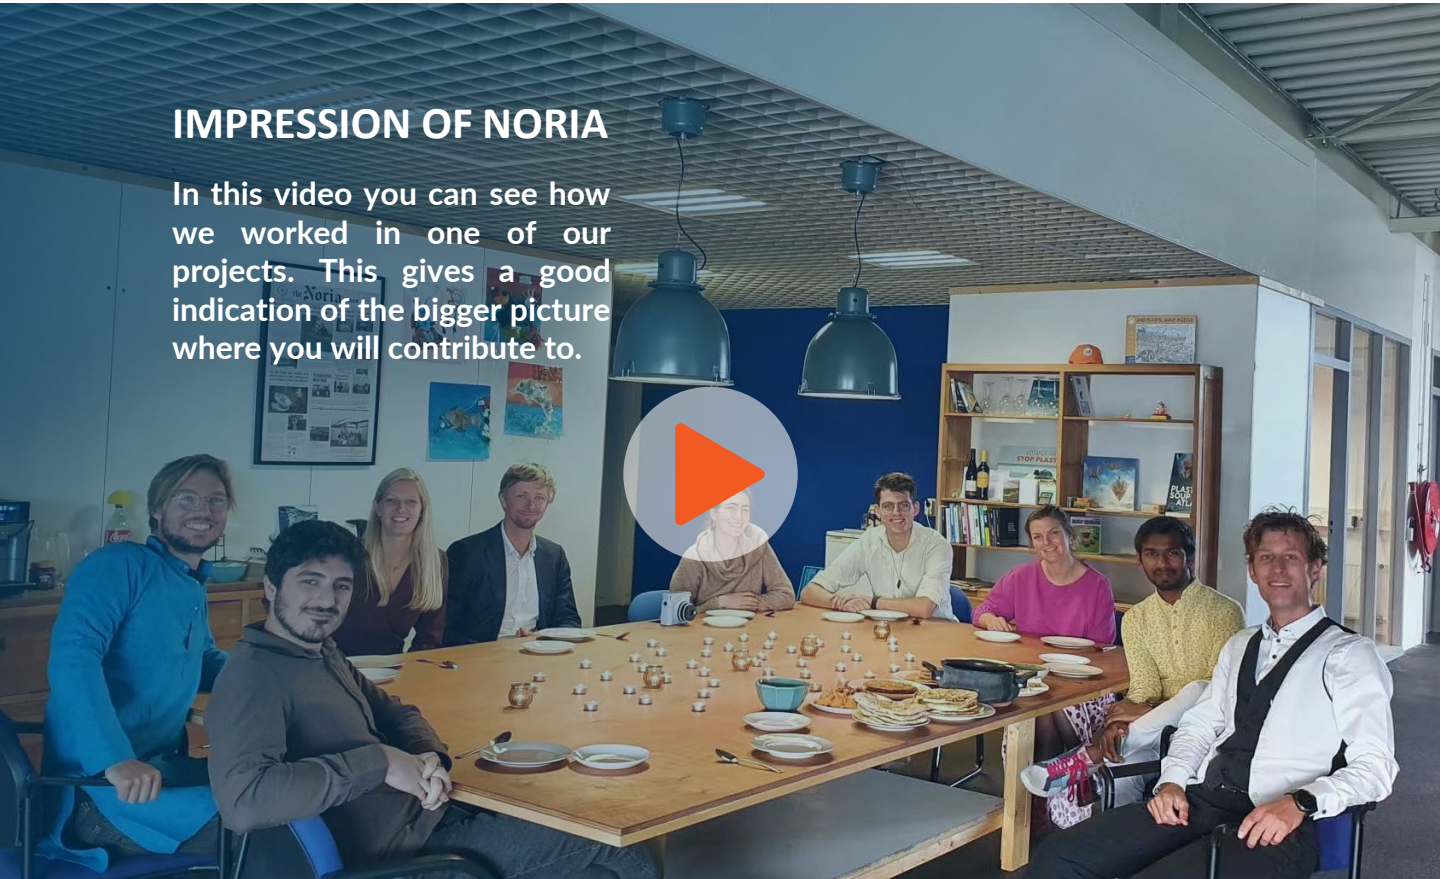

Noria is an impact scale-up. We develop techniques and systems that remove plastic from the water. We do this by using our 3R method, where we work in different phases: **Research**, **Remove** and **Reduce**. In this way we identify the biggest plastic streams, **Remove** them from the water with our catching systems and develop preventive measures to **Reduce** the plastic pollution problem. Our office is located next to the Schie in Delft.

OUR CURRENT CHALLENGES

Our goal is to **remove plastic** from the water so that it **does not cause further damage** to nature and the animals that live in the environment. Currently, we are upgrading our plastic removal system, CirCleaner, for our clients and the European Commission. This is an essential step for further development to tackle the problem strategically and sustainably. To do so, we want to invite you to develop our sustainable **catching system** further.

IMPRESSION OF NORIA

In this video you can see how we worked in one of our projects. This gives a good indication of the bigger picture where you will contribute to.

WORKING IN A STARTUP

Since you will work at a start-up, you should feel very comfortable working in a flexible and dynamic environment. You are eager to come up with out-of-the-box solutions. Our company stands for Innovation, Cooperation and Sustainability.

You will be working in a purpose-driven team. You can be an important part of our journey since we are at the beginning of this new impact adventure! This unique opportunity to work in our motivated startup can help you to build your professional skills.

PROCEDURE

Are you excited to work at an impact start-up? Do you see yourself doing (integrated) product development that will contribute to stopping the plastic soup from growing? Then we are very curious about who you are.

If you have any questions, feel free to reach out to us via LinkedIn or e-mail!

Send us a short, but convincing email with your idea and resume to **info@noria.earth**
